CC	O ₂ emissions from biomass				

^a Parties may wish to express HFC, PFC and SF_6 emissions as either potential or actual. Potential emissions should be estimated using the tier 1 approach of the IPCC Guidelines. Actual emissions should be estimated using the tier 2 approach of the IPCC Guidelines.

^b Parties reporting HFCs and PFCs should provide emission estimates on a gas-by-gas basis, that is, disaggregated estimates by chemical expressed in units of mass (Gg), as indicated in the table (e.g. HFC-23), where information is available. This should be done by inserting a column for each HFC and PFC gas for which emissions do occur in the country; the gases in the column headings are given as examples only. Other gases to be reported in this table include HFC-32, HFC-41, HFC-43-10, HFC-125, HFC-134a, HFC-152a, HFC-43-10mee, HFC-143a,

HFC-227ea, HFC-236fa, HFC-245ca, C_3F_8 , C_4F_{10} , $c-C_4F_8$, C_5F_{12} , C_6F_{14} , and any other GHG with high global warming potential not covered in this list.

¹ A Key Catgeory Analysis including the Land Use, Land-Use Change and Forestry is only performed if the Categories of the IPCC (2003) are being used. If the 1996 IPCC Land-Use categories are being used, they first need to be mapped onto the more recent categories before they can be entered here.

² Follow the Guidance in Section 5.4.2 of IPCC (2003) on the aggregation level at which the analysis should be performed. Take into account Tables 3.1.1 and 3.1.3 in Chapter 3 of IPCC (2003).

³ In this column net emissions/removal estimates from the LULUCF sector should be entered
